CHERISHED TRADITIONS
AND INTELLIGENT BUILDING
FOR SMART LIVING...

We are Norwegian – Lithuanian timber framed house manufacturing company based in Lithuania. We manufacture houses according to Scandinavian technology using state of the art machinery. Our buildings are made resistant to extreme Scandinavian climate, where temperature in summer goes up to +30 °C (95F) and in winter it drops below -40 °C (-40F). We build wood framed houses according to traditional building techniques updating modern materials which are rapidly changing with today's demand for quality. Our company has grown and today we have projects for building framed houses all around Europe: mainly in Norway, Sweden, Great Britain, Italy, Iceland and Baltic countries. Our house building technique expanded to suite different climate and different traditions. The beauty of our work is that we exchange building traditions in different countries and try to achieve the best solution to build a house, suitable to our client.

We work side by side with our sister company Dolena, which is based right next door to us. Dolena builds all type of log houses, manufactures wooden windows, doors. They can offer a wide range of wood deco solutions for interior and exterior. Therefore, it is very convenient for us to cooperate and we can offer our clients combined (log and timber framed) construction buildings.

If you care about the environment you live in, if you treasure yours and your family's health and if you want to live in harmony with nature, log or timber framed house is perfect for you. We not only use eco-friendly materials but also take into consideration other important factors that create a safe living environment for you and treasure natural resources. Wood is a renewable resource — that's why timber house is the most eco-friendly choice. More woods are planted than deforested when strategically forming the forestry policy. Every building — from passive timber frame to log house, in one way or another, helps to diminish fuel consumption and expenditure on it.

Norway

Timber framed houses and log houses can be in different shapes and in different outside or inside cladding. Each country, each region has different culture, traditions and every person has a different opinion what is „nice”, and we understand and value that.

Great Britain

Italy

Sweden

Norway

Great Britain

Iceland

Lithuania

Lithuania

We take on board large projects: village halls, hotels, blocks of flats, schools and sport centres.

We are capable of manufacturing interesting, personal design small size houses: garden offices, tree houses, camping houses and etc.

Construction.

We believe that important issue of our success is good atmosphere in the team. All of us take personal pride in our achievements.
